Towards automation of operando experiments: A case study in contactless conductivity measurements

P. Kraus,*E. H. Wolf, C. Prinz, G. Bellini, A. Trunschke, and R. Schlögl Supplementary Material

Table of contents

1. Excerpt from an <i>instrument log</i> file.	p. S2
2. Excerpt from a VNA log file.	p. S3
3. Summary of the MCPT data for samples activated in C ₃ -oxidation, studied value Handbook protocol. The full archive, including datagrams, schema files, parfiles, and all raw data, is available at DOI: 10.5281/zenodo.5008960	
4. Summary of the MCPT data for other samples studied with the <i>Handbook</i> p. The full archive, including <i>datagrams</i> , <i>schema</i> files, <i>parameter files</i> , and all rais available at DOI: 10.5281/zenodo.5010992	
5. Summary of the MCPT data for samples studied with the perovskite protoc full archive, including datagrams, schema files, parameter files, and all raw available at DOI: 10.5281/zenodo.4980210	
6. Piping and instrumentation diagram of the MCPT instrument	p. S6
7. Technical diagram of the MCPT dewar	p. S7
8. Technical diagram of a MCPT reactor	p. S8
9. Illustration of the MCPT dewar/reactor assembly	p. S9

Additional supplemental files and archives in computer-readable form are available on Zenodo, see DOI: 10.5281/zenodo.5011202. An executable version of this archive is available on Binder.

Figure S1: Excerpt from an instrument log file, showing an example of start-up with a ramp reaching 252°C at 2°C/min (3-12), switch of feed from oxidative to reaction (14-23) and cooldown procedure (25-34). The header (highlighted in green) lists the cavity temperature, cavity temperature setpoint, Peltier duty cycle, N₂ flow, O₂ flow, alkane flow, CO/CO₂ flow, saturator flow, columns, which correspond to the timestamp, elapsed run time, inlet temperature, inlet temperature setpoint, heater duty cycle, inlet pressure, inlet flow (meter no. 1), inlet flow (meter no. 2), cavity flush, heater medium flow, temperature of the calibration thermocouple.

Figure S2: Excerpt from a VNA log file. Only the header (highlighted in green) and the first and last 10 lines shown. The header lists the filter bandwidth (10000 Hz) and number of shots averaged (10). The columns correspond to the frequency f and the real and complex parts of the reflection coefficient $\Gamma(f)$.

Table S1: Results of the operando MCPT investigations of transition metal oxide samples, activated in C₃-oxidation, using the Handbook protocol. Columns include the name and nominal atomic composition, sample ID, reference conductivity at 300° C, activation energy of conductivity, changes in conductivity as a function of inlet stoichiometry and residence time, activation energy of mass-normalized conversion, the ideality of conversion with residence time, and interpolated selectivities to CO_x and C_3H_6 at 5% conversion (dashes correspond to cases where X is well below or above 5%).
